

ENGINEERING A QUIET FUTURE.

Focus on what we measure

A digital solution to transform a rail into a smart rail

About Us

FOUNDATION: 1969 as daughter of Getzner, Mutter & Cie.

EMPLOYEES: 490 (2020)

BUSINESS UNITS: Railway, Construction & Industry

TURNOVER: EUR 105.5 million (2020)

EXPORT RATIO: 91%

LOCATIONS: Bürs (AT), Berlin (GER), Munich (GER), Stuttgart (GER),
Lyon (FR), Paris (FR), Amann (JO), Tokyo (JP), Pune
(IN), Beijing (CN), Charlotte (US), Melbourne (AUS)

Business Units

RAIL

- Lower life cycle costs
- Improved track stability
- Improved passenger comfort

CONSTRUCTION

- Less airborne, structure-borne & impact noise
- Building provides a better quality of life
- Increased property values

INDUSTRY

- Reduced vibration and noise
- Less wear & maintenance costs
- Greater precision & functionality

Elastic Solutions for Railway Superstructure

Under Ballast Mats

Under Sleeper Pads

Rail Pads

Mass-Spring Systems

Elastic insertion pads
for sleeper boots

Baseplate Pads

Known Challenges

Challenges that lead to train delays, maintenance cost and increased LCC

Corrugation

Wear

Hollow

Broken Clamp

Cracks

Deterioration

Benefit from Getzner's core competencies and market presence

Getzner competence of the critical interface

- Ballast – sleeper interface
- Pressure map
- Ballast contact areas
- Load distribution

Make the interface visible and measurable

A sensor which observes the load distribution of the ballast-sleeper interface

Asset Management and LCC

Conditional based monitoring

See actual track quality

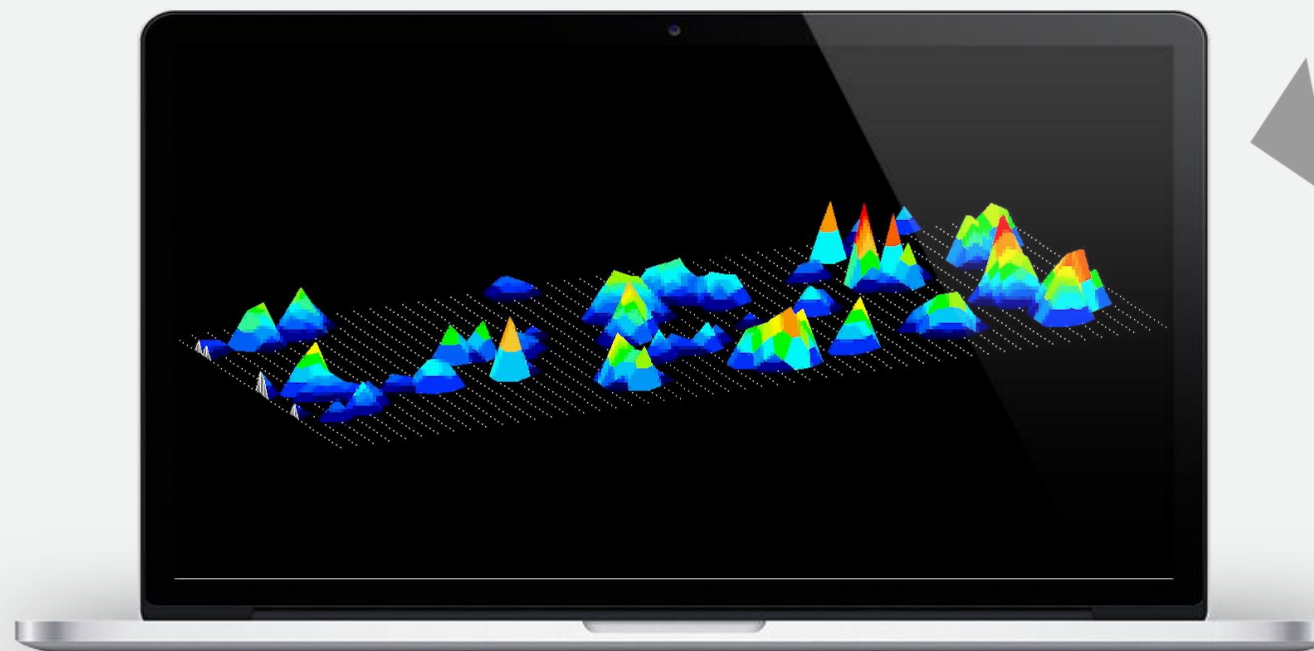

Monitoring of "hotspots"

- Transitions
- Turnout
- Narrow curves
