

Quality polyurethane with national technical approval

Polyurethane materials obtain abZ certification (national technical approval)

Sylomer® and Sylodyn® from Getzner are used to provide vibration protection. In accordance with the Technical Building Rules of the Construction Products List published by the Deutsches Institut für Bautechnik (DIBt - German Institute for Building Technology), they are not subject to any harmonised standards.

The national technical approval (abZ) by the building inspectorate provides evidence of the suitability and fitness for purpose of a material with respect to construction requirements such as reliability, durability and quality. Product-specific properties of the materials, such as the vibration reduction, settlement behaviour and fire resistance, are subjected to tests.

The approval granted by the DIBt shows traders, planners and users that Sylomer® and Sylodyn® meet all the requirements for reliable use in the building and construction industry.
